

PNM Business Energy Efficiency Programs

Hospitals and Healthcare Facilities

Energy Profile

Hospitals are naturally energy intensive, requiring 24/7 operation to ensure a comfortable and safe environment for proper patient care. HVAC, lighting, and water heating make up most of the energy use in these buildings. According to energystar.gov, as much as 30% of a hospital's typical energy consumption can be saved by upgrading to energy efficient equipment and following best practice procedures.

Ways to Reduce Energy Use

Even in a highly regulated environment, efficiency measures are possible to optimize energy use and reduce operational costs. Consider implementing the following upgrades for significant energy savings:

- LED retrofits and controls
- HVAC systems and optimization
- Variable speed drives
- Demand control ventilation system
- ENERGY STAR food service equipment

Average Energy Usage

Based on "healthcare" industry averages, source U.S. Energy Information Administration (EIA)

Example Project

In 2024, a hospital in New Mexico transformed their lighting by retrofitting interior linear fluorescent and high-intensity discharge (HID) fixtures with new LED lighting, adding occupancy sensors, and replacing exterior HID lighting with LEDs. The project saved more than 695,000 kWh and received a \$91,000 rebate from the PNM Business Energy Efficiency Programs.

PNM Business Energy Efficiency Programs offer rebates that lower the cost of upgrading to new energy efficient equipment. The rebate can reduce project costs and shorten your project payback period. Depending on the scope of the project, hours of operation, and size of facility, you could see significant savings.

Don't leave money on the table!
Reserve rebates for your facility today.

Why Improve Energy Efficiency?

- 1 Cuts operating and maintenance costs and improves profitability.
- 2 Savings can help finance future improvements.
- 3 Improves customer and staff satisfaction.
- 4 Distinguishes your business as caring about environmental sustainability.
- 5 Helps you remain competitive in an ever-changing business landscape.

Good Neighbor Fund

The PNM Good Neighbor Fund is a program that helps income-qualified New Mexico families pay their electric bills during times of hardship. The fund is supported by donations from PNM customers, employees, and shareholders, and has supported thousands of households across the state. You can make a meaningful impact by donating all or a portion of your Energy Efficiency Program incentive to the Good Neighbor Fund. Simply submit your energy efficiency project through [PNM's Business Energy Efficiency Program Online Application](#) and choose to allocate all or a portion of your incentive to the Good Neighbor Fund. It's a simple way to give back while supporting your sustainability goals.

Energy Efficient Measures

Rebates are available for both retrofit and new construction or major renovation projects:

- LED lighting and occupancy sensors
- Unitary and split AC systems
- Air source heat pumps
- Water and air-cooled chillers
- Package terminal AC and HP units
- Variable refrigerant flow heat pumps
- Variable speed drives on motors
- Refrigeration equipment
- Evaporator fan motors and controls
- ENERGY STAR-qualified food service equipment

Plus, custom rebates are available for other efficiency upgrades with proven energy savings.

Transportation Electrification Program

The PNM Transportation Electrification Program offers rebates and resources that make it simple for you to install qualified EV chargers at residential and commercial locations. Visit ev.pnm.com for the latest information on charger qualifications, installation assistance, and rebates available.
